Application scope of the project

The intelligent sanitation cloud system provides overall plans

It provides software and hardware programs according to customer demands

Applications

Definition of the intelligent sanitation cloud system

● Main functions of sanitation administrative unit

- Personnel management
- Assessment of outsourcing companies
- Real-time warning message
- Emergency management
- Assessment criterion setting
- Real-time check of equipment state
- Cleaning data statistics
- Breakdown maintenance and follow-up

● Main functions of cleaning and property management company

- Personnel management
- Assessment of dustmen
- Real-time warning message
- Optimal cleaning method
- Assessment criterion setting
- Real-time check of equipment state
- Cleaning data statistics
- Emergency management

● Main functions of maintenance service company

- Product installation and debugging
- Personnel management
- Real-time fault message
- Breakdown maintenance management
- System implementation training debugging
- Service evaluation management
- Real-time check of equipment state
- Emergency management

System components

Intelligent dustbin

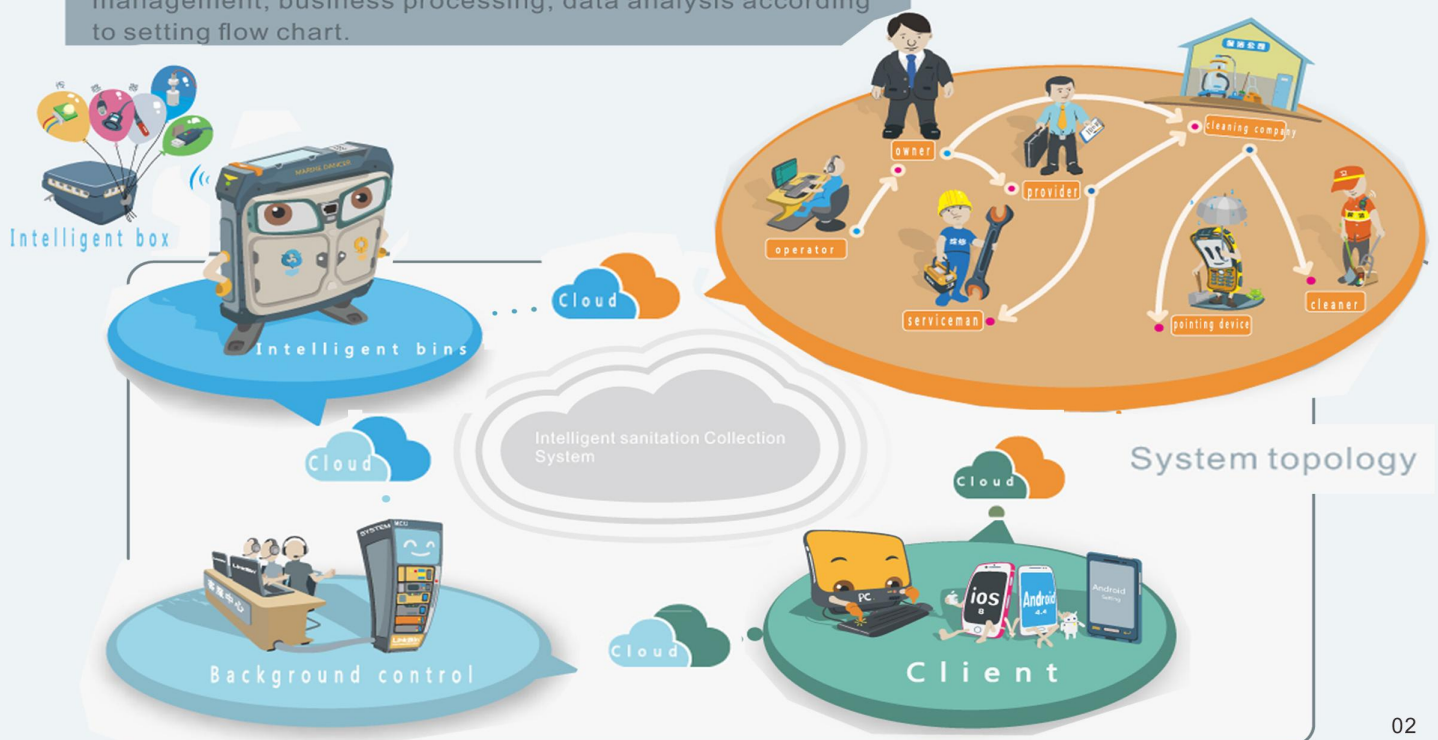

System backstage

Client

End user

Intelligent sanitation system

Hardware devices and service software are connected through network and end users can implement equipment management, business processing, data analysis according to setting flow chart.

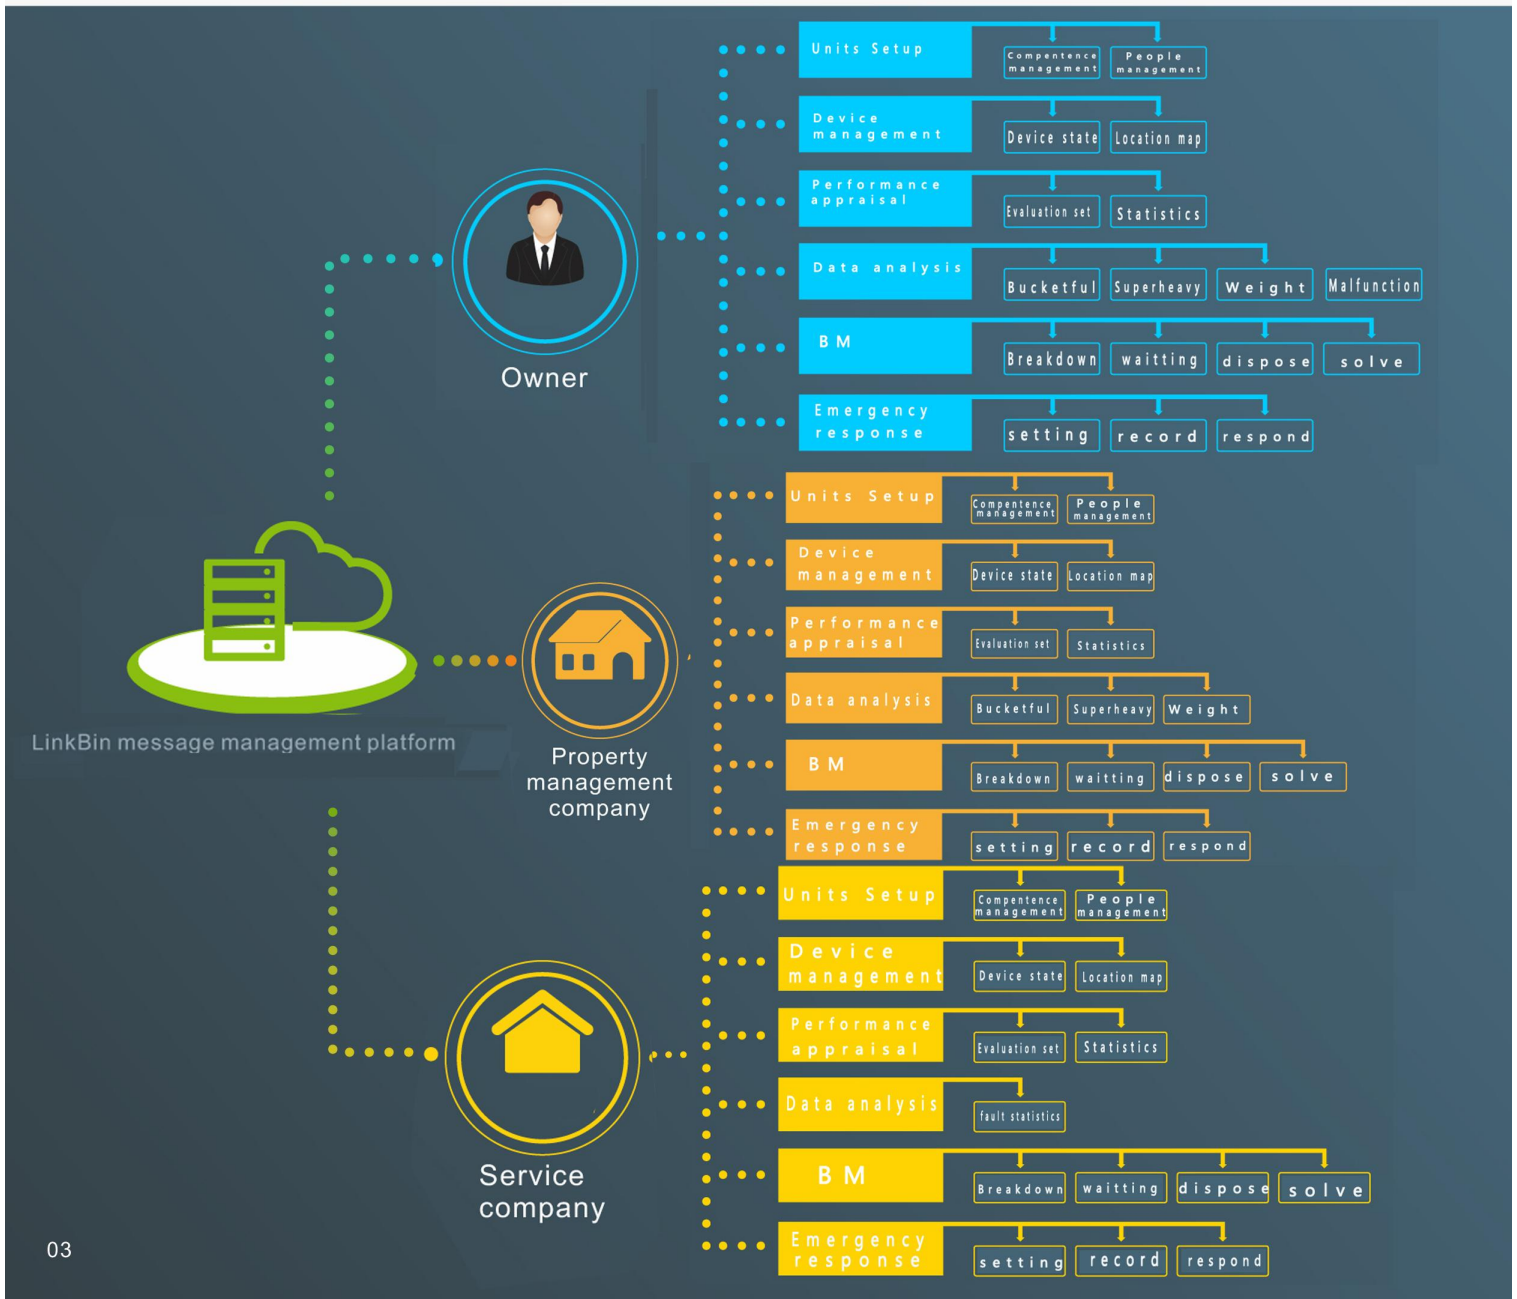

Introduction to system software

The system software is composed of foundation layer, framework layer, component layer, business layer and client. Cooperating with the relational database, a robust, stable, safe and extensible system is established, which is suitable for large-scale data processing and operation. According to demands of intelligent sanitation management, system software which has high expansibility and compatibility can open different interfaces to management software of different platforms and share big data.

Client	PC Android iOS
Operational application	-organization structure -equipment management -emergency response -permission administration -BM -counting and printing -system setup -data analysis -performance appraisal
Component	-WEB-U -APPOPS -information push service -report forms -CRON -IIOT -diagram -mobile internet -tenant management
Frame	-transactional control -internationalization -AJAX -data validation -journal MVC/AOP
JRE	-database -application server -load balancing Linux OS

Dustbin registration

Equipment positioning

Automatic alarm of overload

Automatic failure warning

The intelligent dustbin can send full-load and over-load information to the environmental sanitation administration and cleaning company automatically through the system backstage and inform cleaners in messages. This can prevent damages to city image and the product caused by full load or over load. Cleaners will be informed accurately, reducing labor intensity.

Function – Emergency and remote control

- **Emergency**

The system is equipped with an emergency platform where the environmental sanitation administration can set thresholds, such as full-load times in the setting time, failures, etc. The system can either inform users about threshold exceeding as emergency conditions or release emergency information manually during event presetting.

- **Remote control**

The system has remote real-time monitoring of dustbin state and remote information modification of cleaning and service companies, which is convenient for real-time troubleshooting and modification.

Map • Equipment and personnel positioning

The system will inform the nearest cleaner upon receiving failure message caused by full load or overload, which can increase troubleshooting efficiency and is conducive to personnel management of cleaning company and service company. This is different from traditional personnel assignment in fixed regions and requires lower labor cost.

Map •

The system has map positioning through which managers can check real-time positions of dustbins and personnel. Dustbin state or personnel information can be detected by clicking icons on the map, which is convenient for intuitive management. Moreover, personnel dynamics during working hours could be managed easily.

Personnel location

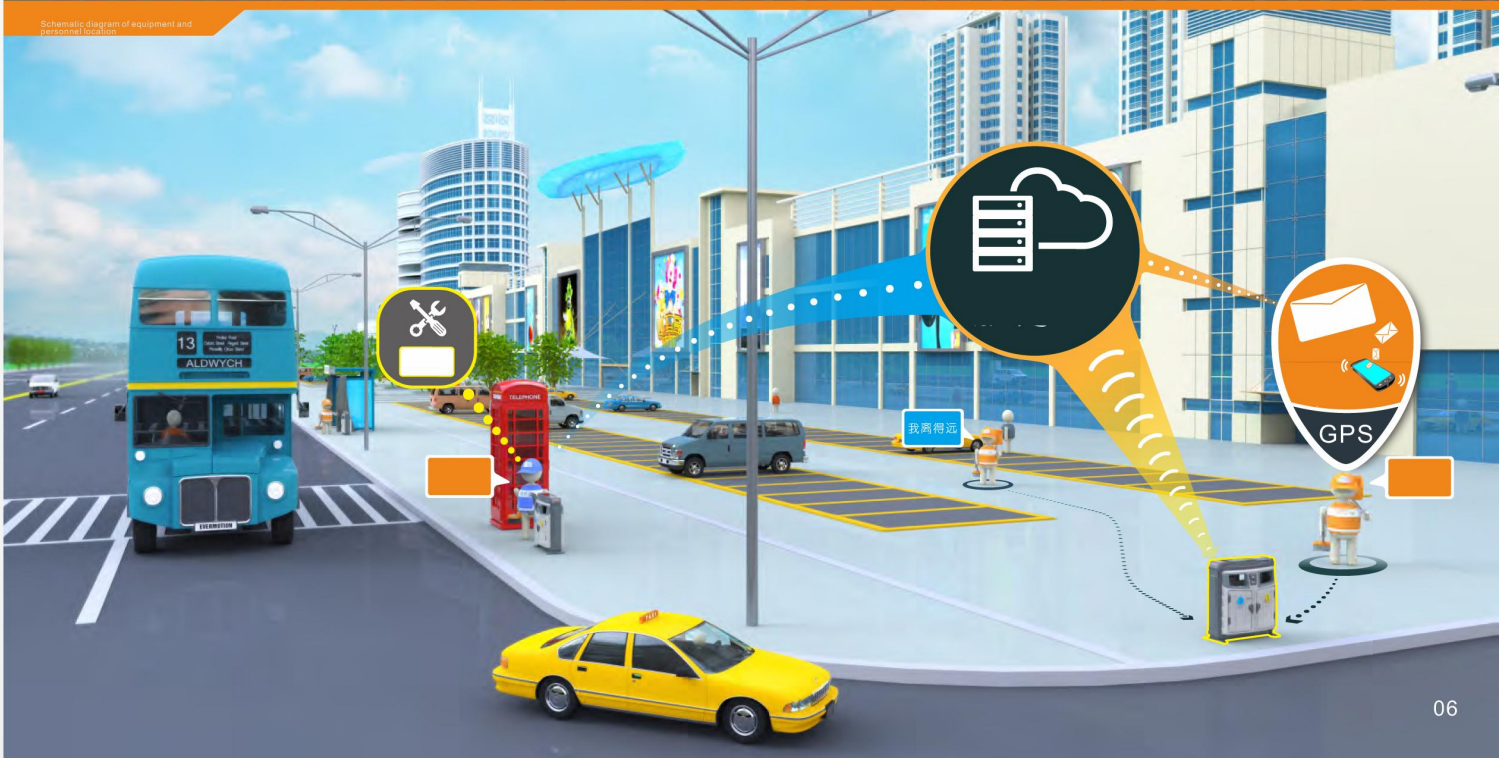

It can display real-time positions of cleaners and acquire information of cleaners quickly, which is convenient for communication and arrangement.

Enter the map ▶

Equipment location

Based on cloud storage and cloud retrieval technique and combining with characteristics and functions of the equipment, it can show accurate positions of large-scaled equipment and describe their real-time operating status. This is convenient for equipment management.

Schematic diagram of equipment and personnel location

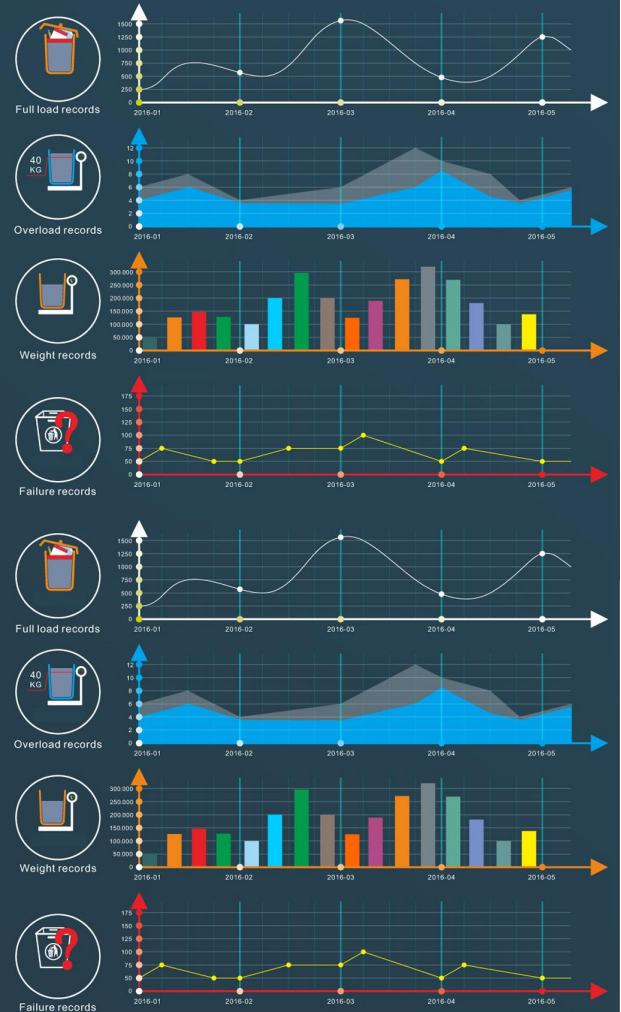

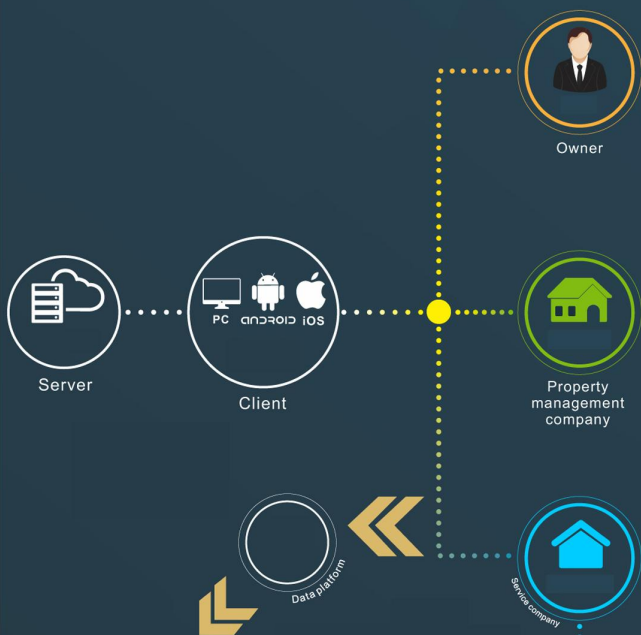

This is good for indoor high-efficiency patrol and monitoring of cleaning.

Trace replay

Function – EStatistical analysis of data

The data statistical analysis of the system can make statistics on cleaning and failure data in a certain period, which provides data supports to cleaning company and service company in future equipment adding, personnel assignment and key work planning, and form a certain scaled big data platform. Meanwhile, it can generate statements which are good for management and reports.

Statements and suggestions

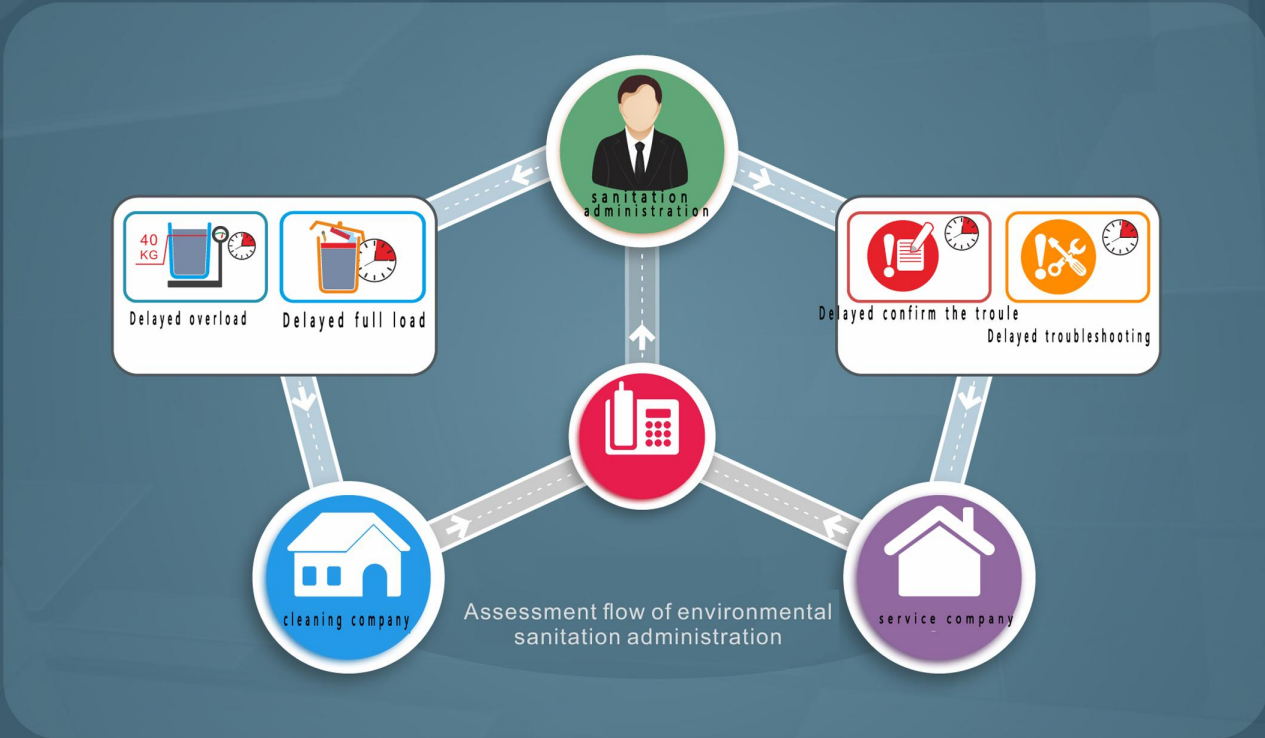

Locations	Item	Full load records	Overload records	Weight records
Wangling Road 045		2016-3-18 16:00	2016-1-15 23:00	2016-2-13 12:30
		Full load	Overload	45KG
Yongan Street 008		2015-12-18 5:00	2016-3-25 13:00	2016-4-05 18:25
		Full load	Overload	15KG

Proposal: One day too much empty number, please clean up in time, thank you for your cooperation

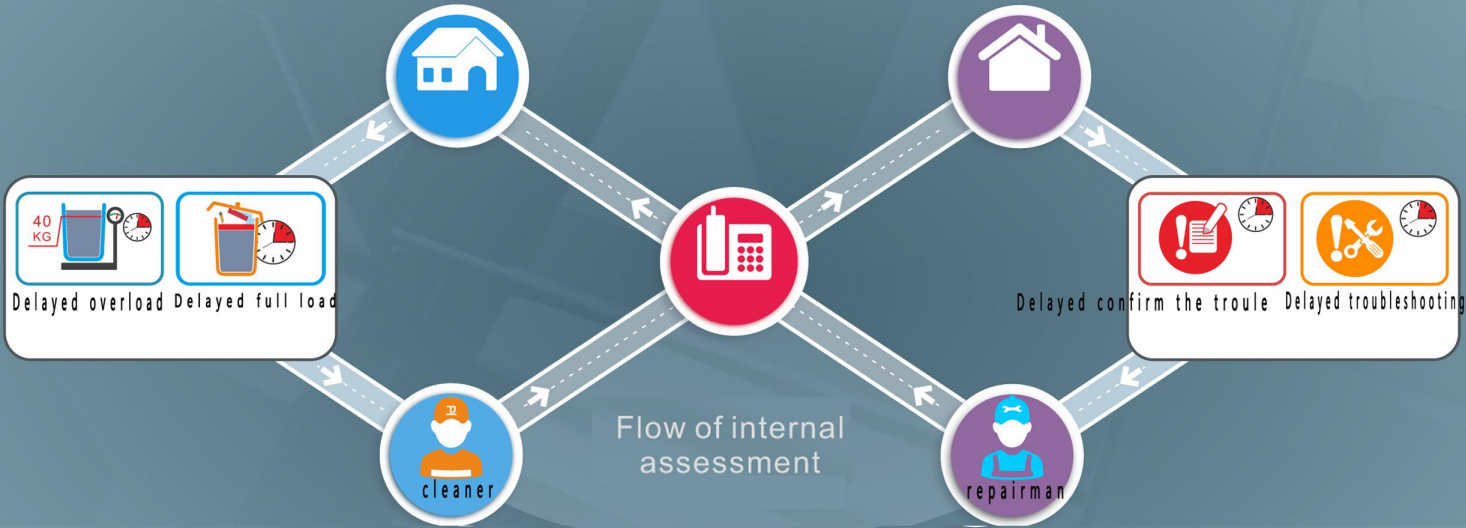

Cleaning and service assessment of the environmental sanitation administration

The environmental sanitation administration can set assessment criteria in the systems, such as delayed cleaning, delayed troubleshooting, etc. Any violation will be scored according to preset point penalty. At the same time, cleaning and service companies can feedback unreasonable penalties through complains. It changes the original manual patrol assessment and realizes fair and justice assessment, which are benefit to improve cleaning and service quality and management efficiency.

Internal assessment of cleaning and service companies

The system has an internal assessment function for cleaning and service companies. Managers can set assessment criteria and the system will accomplish assessment automatically. Employees can solve controversies through the Complain platform. The internal assessment gives cleaning and service companies more justice and fair performance assessments of workers at the production line.

Function – Power supply and energy saving

AC power supply and solar power supply are optional to the intelligent dustbin. AC power supply is switched in by urban lighting line and remote low-voltage, which protects safety use and free electric shock risk. The solar power supply is energy-saving and environmental friendly.

Meanwhile, the system can make remote energy-saving settings to make dustbins in sleep mode, which is environmental friendly, low-carbon and energy conversation.

Dustbin registration

Function - Others

The LinkBin possesses more additional functions, including night warning light, online hardware upgrading, voice self-inspection, etc. These make it more humanized and make the city image even better.

DH-02 series

Intelligent dustbin

With distinct lines and corners and ingenious design, the product can better reflect youthful charm of modern cities.Night

DH-02SK2 and DH-02ASK2 intelligent dustbin is switched in urban lighting lines and far-end low voltage, which ensures its safety service and prevents electric shock risk.

Three-color warning lights

There are three-color state warning lights at the top of upper cover: early warning of full load, water shortage and breakdown.

Solar power supply system

A solar panel is designed at the top of the dustbin, which can convert collected solar energies into electric energies for internal electrical equipment.

Location of the dustbin

The inner bin is equipped with a GPS module which can report the dustbin location by mobile phone APP. Any position deviation will be informed through mobile phone APP or SMS AutoSender.

Self-extinguishment

There's a water tank ($\geq 3.3L$) under the upper cover and a water-feeding rubber cover which requires manual feeding under the right shoulder cover. The nozzle at the bottom of the water tank will spray extinguishing solution automatically once the in-tank temperature exceeds $68^{\circ}C$ upon material combustion, which could prevent and reduce fire risks.

Garbage weighing module

This can prevent damages to city image and the product caused by full load or over load. Cleaners will be informed accurately, reducing labor intensity.

Early warning of full load

Early warning of full load will be sent to the backstage through mobile phone APP or SMS AutoSender when reaching 80% of full load. This can clean dustbins in time and prevent garbage scattering around.

Detection of temperature

Tank temperature is detected through instant messaging (IM) and the backstage will be informed overhigh temperature ($>70^{\circ}C$) timely through mobile phone APP or SMS AutoSender. Maintainers can check the existence of fire source in advance, which increases security of public utilities significantly.

Box-door integrated enhancement

The box and door are made of high-quality hot galvanizing electrolysis cold-roll steel sheets (thickness $\geq 0.8\text{mm}$) by integrated stretching once-shaping technique. It not only has a beautiful appearance and no welding spot, but also possesses far higher strength than those

Detection of water level

For the convenient and prompt maintenance and saving labor resources, water level in the water tank can be detected at any time through mobile phone APP or SMS AutoSender.

Ultra-large batter capacity

The AC intelligence mode uses 2,200mA lithium battery which can protect stable and normal operation of the system. The solar intelligence mode uses 8,800mA lithium battery which can offer about 15d-service after being exposed to adequate sunlight for 1-2d.

If the water level is detected low, the right shoulder cover and water-feeding rubber cover shall be open for manual water supply.

Full-open automatic closing door

The door and box are connected by a piece of 304 stainless steel spring hinge which makes the door open for up to 150° and closing smoothly. The strength and service life of 304 stainless steel spring hinge are at least 3 times higher than those of common tension spring.

Extra-large stainless steel extinguishing flip cover

The extinguishing plate is stamped by once with wire drawing stainless steels (thickness $\geq 0.7\text{mm}$) and a piece of cold drawing mold, accompanied with extinguishing holes and cigarette end holes. There's an ashtray (0.8L) beneath the extinguishing plate and an independent triangulation chain that can be opened separately on the extinguishing plate, which is superior to common external extinguishing plate (bowl) in effective prevention of secondary pollution caused by ashes and cigarette ends, convenient to clean, beautiful and durable.

DH-02ASK1

Side cover with warning function

The side cover can conceal joints on the upper framework and has night reflecting sign for easy recognition and protecting safety of pedestrians and vehicles at night.

Battery mouth

The battery mouth uses profiling design and the surface metal is coated with chrome.

Scratch-proof engineering plastic mouth

The mouth is made of full-rounded engineering plastics, which can beautify the product and avoid scratches.

Easy-recognized 3D classification signs

3D classification signs are designed on the door and people can recognize different garbage recycling. Moreover, 3D classification signs are attractive and conducive to enhance people's awareness of garbage classification.

3D fixed seat

The fixed seat is made of high-quality hot galvanizing electrolysis cold-roll steel sheets (thickness $\geq 2\text{mm}$) by integrated stretching once-shaping technique. Mounting holes are designed dangling, which fasten the product onto the ground.

Riveting integrated framework

The product uses riveting integrated framework without welding spot. The framework adopts hydraulic once-shaping using cold drawing mold and hot galvanizing electrolysis cold-roll steel sheets (thickness $\geq 0.8\text{mm}$) as the base material. Its strength and corrosion resistance are at least 2 times higher than those of common shear-plate welded frame.

Ultra-large volume of inner

The inner bin is designed with ultra-large volume and the average thickness is $\geq 2.0\text{mm}$. The volume of two bins reaches as high as 80L.

Bag bayonet on the inner bin

Bag bayonets are designed at the inner bin mouth to fix garbage bags. This is convenient for use and clean of the dustbin.

Dirt-storage and spill-proof inner bin

There are spill-proof convex platform and water escape valve at bottom of the inner bin. The convex platform can keep sewages during normal service and excessive water upon heavy rains could be discharged through the water escape valve, preventing garbage spill (drift) from the inner bin.

 Scene case

warning light, voice self-inspection
make the product more humanized and
make the city image even better.

Note: Now we only have the K1 and K2 types, for all the intelligent types will come soon!
